Description

Create a note pad in python

```
if __name__ == "__main__": notepad =  
    Notepad()notepad.mainloop()
```

- Notepad is a text editor that comes pre-installed on Windows computers. Notepad isn't just for taking notes and opening readme files. You can also use Notepad to make basic computer programs. You can do this by creating batch files that run scripts in the Windows Command Prompt. Notepad is a text editor that comes with all versions of Microsoft Windows that lets you create, open, and read plaintext files.

Reviews about class and bano qabil 2.0

- **Alkhidmat Karachi has stepped in with an ambitious and first-of-its-kind education initiative called "Bano Qabil" to help Karachi's youth. Bano Qabil offers 100% free, advanced IT courses packed with the latest technologies to give our youth a headstart in launching their employment and freelancing careers.**

Reviews About class teacher

- Miss Sumbul M.Saleem.
- she is polite, well educated, friendly, and an excellent teacher. she considers all the students as her own children and guides us as a friend and mentor. We enjoy her class a lot as her makes us happy too. Thus, I am forever grateful and incredibly proud to have such a great teacher.

Thank you

Thank you so much
